SUMMARY

Backend Software Engineer with 3+ years building and scaling REST APIs and cloud-native services for Fintech, InsureTech, and government e-revenue platforms. Core strength in Java and Spring Boot — Spring Data JPA, Spring Security/JWT, layered service architecture, and query/performance optimization — backed by production experience on AWS and Docker/Kubernetes infrastructure. Delivered high-availability, multi-tenant payment and revenue systems used across multiple counties and international payment rails.

SKILLS

- **Backend (Java):** Java, Spring Boot, Spring Data JPA, Spring Security, Hibernate, JWT/OAuth2, RBAC, REST API design, Maven
- **Backend (Python):** Python, Django, Django REST Framework, FastAPI, Celery
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, RDS, VPC, IAM, ECS Fargate, Amplify, CloudWatch), Docker, Kubernetes, CI/CD (GitHub Actions), Nginx/ALB
- **Databases:** PostgreSQL, PostGIS, MySQL, Redis, SQLite, H2
- **Testing & Quality:** JUnit 5, Mockito, MockMvc, PyTest, TDD, code review
- **Messaging & Integration:** Kafka, RabbitMQ, Swagger/OpenAPI (v2 & v3), M-Pesa, Stripe, PayPal, USSD
- **Frontend:** React (TS/JS), JavaScript, HTML, CSS

EXPERIENCE

Java/SpringBoot Software Engineer | Caava Group
May 2026 – Present | Lavington, Nairobi (Hybrid)

- Delivered features and refactor requests across payment, general ledger, cashbook, and receipting microservices within a multi-module Financial Control Platform (v6), spanning cheque printing, cheque allocation history, active chequebooks, and payment processing dashboards.

- Designed and built REST endpoints backed by Spring Data JPA entities and DTOs for chequebook and payment workflows, including file-transfer detail retrieval and account-type/branch ledger changes.
- Integrated Feign clients to consume CRM and Financial Setup microservices, and extracted JWT-based user context to enforce consistent authorization (RBAC) and audit trails across payment endpoints.
- Led the migration of OpenAPI/Swagger documentation from v2 to v3 across payment, general ledger, and receipting microservices, standardizing response schemas, DTOs, and error codes for cross-team consumption.
- Diagnosed and resolved N+1 query bottlenecks using @EntityGraph and custom batch fetching, and restored test coverage lost during branch rebases to keep CI/CD pipelines green.
- Built and maintained automated test suites (JUnit 5, Mockito, MockMvc), consistently incorporating code-review feedback to harden endpoint reliability before release.

FullStack Engineer | Dubu Huru Ltd

August 2025 - May 2026 | Remote

- Led a cross-functional team of 4 in designing and deploying a high-availability Fintech SaaS platform serving global users with ~90% early production uptime.
- Architected backend REST APIs using Python/Django, achieving low-millisecond response times across multi-currency payment flows (M-Pesa, Stripe, PayPal).
- Designed fault-tolerant cloud infrastructure on AWS ECS Fargate with Auto Scaling and ALB across multiple Availability Zones, achieving 99.9% availability.
- Decoupled heavy asynchronous tasks (payment callbacks and analytics) using Celery workers with Redis as a message broker.
- Built CI/CD pipelines using GitHub Actions and multi-stage Docker builds for automated, secure deployments to AWS ECR and ECS.

Software Engineer | Jambo Pay

May 2024 - August 2025 | Westlands, Nairobi

- Developed a multi-tenant E-Revenue Management System serving 10 Kenyan counties across parking fees, land rates, and e-wallet payments.
- Led the migration of legacy monolith modules to decoupled RESTful API endpoints, reducing frontend-to-backend latency by 30%.
- Implemented geospatial tracking using PostGIS and composite database indexing, reducing cross-county query retrieval times from seconds to milliseconds.
- Integrated USSD payment workflows and e-wallet features with PostgreSQL schema optimization and real-time transaction reporting.
- Established standardized unit and E2E testing suites covering critical payment flows, decreasing production bug reports by 20%.

Software Developer Intern | Jambo Pay

May 2023 - August 2023 | Nairobi

- Learned Python programming and Django/Django REST Framework.
- Developed backend project assignments assigned by the CTO.
- Collaborated with developers to ensure smooth project development and requirements achievement.

EDUCATION

Mount Kenya University | Bachelor of Science in Information Technology

Graduated Dec. 2023

- Second class upper

Certifications

- KCNA: Kubernetes and Cloud Native Associate
- AWS Cloud Practitioner, DevOps on AWS, Cloud 101
- Networking: CISCO CCNA
- Claude Code
